

TECH TIPS

Many long-time professional treasure hunters prefer the non-motion operating system of the CS990 and CS1220XDP. You don't need to keep the search-head moving for the machine to work correctly and there is a lot of target analysis information contained in the signals from underground. There are more user adjustments to be made with non-motion machines, particularly with ground compensation - this is the detector's natural inclination to detect electromagnetic targets, which in some cases includes the ground itself, so you have to set the machine to eliminate the ground effects and only detect the metal objects. However, you'll find that the CS990 and CS1220XDP are as user-friendly as it is possible to be, and an excellent choice for professional coin and relic hunters.

CS 1220 XDP

The CS1220 is a DESIGN CLASSIC in the world of metal detecting.

This unique machine was originally conceived by the C.Scope Research and Development Team more than 10 years ago.

The design has been refined to perfection and now called CS1220XDP characterised by its new 25cm diameter 'XDP' search-head.

The CS1220XDP is fully loaded and ready to find treasure - C.Scope's most successful detector ever!

The CS1220XDP will rapidly become your favourite detector and it will get you RESULTS! The reasons why the CS1220XDP is everybody's favourite detector are apparent as soon as you use one.

The CS1220XDP has its own character - it's a highly user-friendly character that you can get along with, and when you start to dig up the finds together, you'll wonder how you ever got along with any other machine.

- New XD Power circuitry
- Meter discriminate mode.
- Large clear view meter.
- Infinitely variable audio discrimination.
- New lightweight stem - perfect balance.
- Moisture & dust protected design features.
- Headphone and battery recharge sockets.
- SUPERLITE 25cm diam search head.
- New 8 x AA cell battery pack.
- 2 position ground control.
- Variable discrimination.
- Rapid, pushbutton mode change.
- C.Scope quality construction. ISO 9001. Made in Britain.

CS 990

Unique ergonomic styling coupled with an easy-to-understand, non-motion operating system have made the CS990 a firm favourite with detectorists the world over. Perfect balance and light weight are major plus points for those hunters who find they cannot get along with the professional 'S' stem format preferred by most detector users.

You can match the CS990 to the ground characteristics for improved depth on all sites plus you get the big bonus of audio discrimination - a superb feature which allows target ID by sound, as well as visual meter confirmation.

The CS990 really is big on features, low in price. It is without comparison, a high performance, treasure finding machine.

**Neat styling,
high performance,
budget price.**

- Audio discrimination. SIMDISC.
- Meter discrimination
- Ground compensation
- 2-part adjustable stem
- 20cm inch ISOCON waterproof loop
- Push-button re-tune
- 4 x 9 volt batteries/condition indicator
- Loudspeaker and head phone socket
- Weight Inc. batteries - 1600 gms
- 17Khz operating frequency
